12 ????&#0183; Inside, Citizen's reliable "in-house" Miyota 8210 automatic movement is a 21 jewel workhorse that operates at 21,600 vibrations per hour (3 Hz) and provides the essential ...

The power reserve indicator is one of the most useful features of a mechanical watch besides the actual time display. A mechanical watch is operated by either automatic or manual winding. In order to run at a regular rate a mechanical timepiece needs to have at least 30 per cent of its mainspring wound. An automatic timepiece needs to be worn for about 10-15 hours before it is fully wound.
