

In this paper, we present the first study of acousto-optic (AO) Q-switched diode-pumped Alexandrite lasers with wide wavelength tunability of a high-energy mJ-class oscillator, and ...

The acousto optic interaction modulates the laser beam by switching on and off the acoustic field (or waves). When a caustic field is off, the laser beam remains undeviated ...

In conclusion, the electro-optic Q-switched, acousto-optic Q-switched, and passive Q-switched technologies have dif-ficulty obtaining the frequencies above megahertz (MHz). Mode-locking ...

The experimental study of the home made SiO₂ laser AO Q-switch with LN PT - SiO₂ crystal - LN PR structure fully confirmed the theoretical conclusions and the usefulness of the practical ...

The precise control of laser pulses is paramount in numerous applications, from scientific research and medical procedures to industrial material processing. Acousto-optic Q-switching, utilizing ...

GU Optical has launched Free Space Isolators with wavelengths of 532nm and 1064nm. This product has the characteristics of high power, high transmittance, high isolation, and high laser ...

Q-switching plays a pivotal role in optimizing laser performance by producing high-intensity pulses with great intensity. There are multiple types of Q-switches used - Electro ...

Electro-optic Q switches are used for pulse generation by Q switching of lasers. They are faster than acousto-optic devices and can be suitable for high powers.

The use of Q-switching is the main means to achieve high repetition rates and nanosecond pulses. Since the first use of electro-optic Q-switching to achieve nanosecond ...

Acousto-optic switches are an essential component of modern laser systems, enabling precise control of light beams through the utilization of sound waves. Acousto-optic ...

Fig. 2. Schematic diagram of acousto-optically Q-switch CO₂ laser The discharge tube is made by glass with water cooled pipe. The rear mirror is a spherical mirror coated with gold, and the ...

Acousto-optic Q-switches enable precise control over parameters such as pulse duration, peak power, and repetition rate by modulating the quality factor (Q-factor) of the ...

A diode-end-pumped Er:CaF₂-SrF₂ laser actively Q-switched by a TeO₂ acousto-optic crystal was demonstrated for the first time, to our best knowledge. By setting the ...
