Which energy storage battery certifications are available in Europe?

Discover the essential energy storage battery certifications in Europe, including CE, IEC 62619, UN38.3, and EN 50549. Ensure your BESS meets EU safety, performance, and grid compliance standards in 2025.

What are the IEC standards for lithium batteries?

The following IEC standards are central to certifying industrial and residential battery systems: Safety requirements for secondary lithium batteries used in industrial applications. Essential for C&I and residential storage systems. Safety standard for portable lithium cells and batteries (mainly for smaller, consumer products).

Are lithium batteries covered by the general product safety regulation?

The General Product Safety Regulation covers safety aspects of a product, including lithium batteries, which are not covered by other regulations. Although there are harmonised standards under the regulation, we could not find any that specifically relate to batteries.

What certifications do you need to ship lithium batteries?

If you're shipping lithium batteries by air, sea, or road, UN38.3 certification is a must. It ensures batteries can withstand vibrations, shocks, altitude, thermal extremes, and short circuits during transport. 4. Grid Compliance: EN 50549, VDE-AR-N 4105, G99

Are lithium batteries safe?

Lithium batteries are subject to various regulations and directives in the European Union that concern safety, substances, documentation, labelling, and testing. These requirements are primarily found under the Batteries Regulation, but additional regulations, directives, and standards are also relevant to lithium batteries.

What are the requirements for the transport of lithium batteries?

The requirements include: The Inland Transport of Dangerous Goods Directive requires that the transportation of lithium batteries and other dangerous goods must be done according to the requirements of the Agreement concerning the International Carriage of Dangerous Goods by Road (ADR).
