Why are electricity rates fluctuating in Mexico?

In recent years, Mexico has experienced fluctuations in electricity rates due to a variety of factors, including changes in government policy, shifts in energy production methods, and global market trends. The country's energy sector has been undergoing significant reforms aimed at increasing competition and reducing costs for consumers.

Should electrical energy storage systems be used in long-term power auctions?

As being generally technology-agnostic, the use of Electrical Energy Storage Systems (EESS) within the long-term power auctions was neither explicitly encouraged nor discouraged. This analysis assumes that the EESS, more specifically the BESS, would be part of a solar PV plant.

How much does a power plant cost per MW?

This value is in line with typical market conditions worldwide, where the contracted operation of such services is typically between 150,000 USD and 400,000 USD (3 to 8 million MXN) per MW and year.

Is electrical energy storage system use case a source of revenue?

An Electrical Energy Storage System use case for the capacity component only exists if a capacity component was awarded in the auctions. Therefore, no revenue can be generated from the results of the 2015 auctions due to a lack of awarded capacity bids. However, capacity is a possible source of revenue from the 2016 and 2017 auctions.

Prices for industry are equivalent to those in the United States, but prices for households are 70% lower. Total energy consumption per capita is 1.4 toe and electricity consumption per capita reached around 2 500 kWh (2024). Total energy consumption increased by around 3%/year on average from 2020 to 2023, and remained stable in 2024 (186 Mtoe).

How much power does a battery energy storage system use?

A typical Battery Energy Storage Systems in standby only consumes between 0.5 - 2% of its nominal power (e.g., a BESS with a nominal power of 1 MW would have an average auxiliary power consumption of 5 kW - 20 kW) and can be started from the "cold" offline state to the "hot" running state within 5 seconds or less.
