Are Australia's big battery costs coming down?

Image: EnergyAustralia. The Riverina and Darlington Point BESS. The developers of Victoria's first four-hour big battery say the costs of building large-scale battery energy storage are coming down in Australia, as demand grows and the dynamics of the global supply chain start to settle.

Will solar batteries be the dominant form of battery storage in Australia?

Bloomberg New Energy Finance estimates that by 2020, solar batteries will be the dominant form of battery storage. Analysis by the Smart Energy Council from the survey and interviews with market participants for this report suggests battery manufacturing costs are likely to fall in Australia by around 15% each year to 2020.

How many battery storage systems are there in Australia?

As noted in this report, there are likely to be 150,000 to 450,000 battery storage systems installed in Australia by 2020. If the high growth scenario eventuates, the Finkel Review will be seen to have significantly underestimated the uptake of battery storage.

Are battery installations stable in Australia?

As shown in Figure 29, battery installations were relatively stable from 2010 to 2015. These were probably largely off-grid systems. There was a substantial rise in installations in 2016 (mostly in the second half of 2016) as the price of lithium-ion batteries plummeted and new battery storage companies entered the Australian market.

Are battery storage costs falling?

Dixon also notes that battery storage costs are falling significantly, highlighted by the cost reveal from Origin Energy when it announced the second stage of the Eraring battery last week.

How many home battery systems are there in Australia?

Home battery systems surpassed 250,000 by the end of 2023, accounting for more than 2700 MW hours of capacity. While this number may seem high, around 3.7 million Australian homes have rooftop solar units installed, meaning less than one in 14 households with solar units have home battery systems installed.

Batteries play a crucial role in the Australian electricity network by providing energy storage solutions that enhance grid stability, support renewable energy integration, and improve energy security. This guide explores the purpose and ...

The average capacity of projects being commissioned has been steadily rising since 2015 (when no battery storage capacity was commissioned), to a high in 2023 of just over 33MW. Figure 2: Capacity ...
