

Average mobile ESS unit price per 1GW in Ethiopia

How much does electricity cost in Ethiopia?

Such a mechanism is in line with the tariff guidelines and can be linked to or combined with the four-year tariff adjustment plan. Hydropower costs range from 3-5 cents per kWh, and wind and solar costs are between 5-7 cents per kWh. These cost structures align with Ethiopia's export tariffs to Kenya, which are priced at USD 6.5 cents per kWh.

Why are Ethiopian Electric Utility and EEP limiting access to electricity?

The Ethiopian Electric Utility (EEU) and Ethiopian Electric Power (EEP) have struggled with outdated infrastructure, frequent power outages, and high losses, further limiting access.

How much electricity does Ethiopia produce in 2040?

The share of solar in electricity generation reaches 17% in 2040. Ethiopia's net electricity exports until 2036 will primarily be driven by large-scale hydropower investments. However, net import of electricity is expected from 2038, as the pace of demand growth in Ethiopia exceeds that of supply, in the least-cost development. See Figure 6.4.

What percentage of Ethiopian households have access to the National Grid?

By 2024, only 22% of Ethiopian households had a legal access to the national grid, with significant disparities between urban and rural regions. While Addis Ababa enjoys an electrification rate of nearly 93%, regions such as Afar and Somali remain below 12%. From 2019 to 2024, 2.2 million households were connected to the grid.

Are electric vehicles a viable alternative to fuel imports in Ethiopia?

Rapid adoption of electric vehicles (EVs) is reducing reliance on costly fuel imports while leveraging Ethiopia's renewable energy resources. Ethiopia has vast, largely untapped solar and wind resources, along with hydropower projects with strong economic potential.

How much solar power does Ethiopia need?

Figure 2.2: Illustration of the solar potential in Ethiopia and the required land area: A 108 km² solar PV park (the small yellow square placed in Somali region) would generate 18 TWh/year - the same as the current demand. In practice the area should be spread over the country. A similar generation from wind power would require 500 km² area.
