

Can the price fall if the country sells off its soybean meal reserves

Why did soybean meal prices fall?

After standing at the average spot price of around 673 USD/MT in January'23 in the Chinese domestic market, the Soybean Meal prices descended to around 546 USD/MT in June'23, registering an approximate depreciation of about 18%. This decline was mostly attributed to the existing high stocks of edible oils and oilseeds.

Why did soybean prices drop in Brazil in December 2021?

In Brazil, soybean meal prices started to drop after mid-October, due to lack of demand and remarkably high production in the country. By the third week of December 2021, prices had dropped by almost 21% (by 112 USD/MT) even though the crops suffered due to dry and cold weather conditions.

How much does soybean meal cost in the Middle East?

Middle East and Africa In the last week of May, the wholesale price of soybean meal was 950 USD/MT. The price rose astronomically to 4020 USD/MT in the first week of June, indicating a rise of 323.2%.

How did soybean meal prices change in 2023?

Soybean meal prices almost replicated the price trend of its feedstock soybean during the second half of the year 2023. Soybean meal is a byproduct of the soybean oil extraction process. In the Asian market, the prices were mostly wavering within limited boundaries. The production was high, and the demands were casual.

Why are soybean futures prices falling?

For more than two years, however, soybean futures prices have been on a firm downward trajectory, declining from a near-10-year high in May 2022 of around \$17.30 per bushel to below \$11.00 per bushel by mid-July 2024. This trend is partly reflective of the wider bearish sentiment enveloping the grain complex this year.
