Compressed Air Energy Storage (CAES) has emerged as one of the most promising large-scale energy storage technologies for balancing electricity supply and demand in modern power grids.

In particular, three commercial compressed-air energy storage (CAES) facilities currently exist in Germany, the USA, and Canada, each exploiting salt caverns (Kim et al., 2023).

This technology provides crucial support for the integration of renewable energy sources, while also offering flexible energy storage and release to address the fluctuating ...

Compressed air energy storage in aquifers (CAESA) is a novel large-scale energy storage technology. However, the permeability effects on underground processes and ...
