

Domestic energy storage tender price in Norway 2026

Why are Norway's electricity prices so low?

Historically, Norway has enjoyed relatively low electricity prices, thanks to its extensive hydroelectric power generation, which accounts for nearly 90% of the country's energy supply. However, this sharp rise in prices is largely due to a shortfall in wind energy from Germany and the North Sea.

Will Norway cut its electricity interconnection with Denmark in 2026?

In response, Norway's government covers 90% of the additional costs above a certain threshold, in line with agreements made with neighboring European nations. As a result, the government plans to cut its electricity interconnection with Denmark when the current agreement expires in 2026 and suspend exports to Germany and the UK.

Why are wind energy prices so high in Norway?

However, this sharp rise in prices is largely due to a shortfall in wind energy from Germany and the North Sea. In response, Norway's government covers 90% of the additional costs above a certain threshold, in line with agreements made with neighboring European nations.

Why did Norway reject new interconnector proposals until 2029?

Norway's recent policy shift in the energy sector marks a pivotal moment for both the national and regional electricity grid dynamics. The government's decision to reject new interconnector proposals until 2029 underscores a strategic hesitation towards further integration with wider EU energy directives.

Why are electricity prices so high in Sweden and Norway?

Both Sweden and Norway suffer from inadequate internal electricity transmission infrastructure, which results in higher prices in the south--where demand is concentrated--compared to the north, where much of the power is generated. Europe's shift towards renewable energy sources like solar and wind has faced significant challenges.

Does Norway need a new energy policy?

Despite its abundant and inexpensive hydroelectric power, Norway's energy prices have increased domestically when European countries draw on that energy. Norway may have to revert to an old policy and allow those power exports only when its power demand is satisfied to the dissatisfaction of its European neighbors.

Battery energy storage systems (BESS) projects developed by Statera Energy, SSE Renewables and Statkraft UK all secured contracts through NESO's Voltage 2026 tender, with a fourth contract awarded to a reactor in
