

A dual-filter approach based on chaotic firefly algorithm-optimized particle filtering was then employed for joint SOC and SOH estimation. Experimental validation shows that the algorithm ...

This study aims to develop a novel hybrid energy storage system (HESS) with an adaptive digital filter-based energy management strategy (ADFBEMS) for electric v

Xu et al. [24] established a hybrid energy storage optimization model for an off-grid wind power-energy storage system, aiming to maximize annual generation profit and ...

ABSTRACT It is challenging for a battery management system to estimate the State-Of-Charge (SOC) of batteries. A novel model-based method, using a Dual Extended Kalman Filtering ...

The dual active bridge (DAB) converter has been widely applied in energy storage systems because of the high-power density, galvanic isolation and soft switching properties. However, ...

The superconducting magnetic energy storage (SMES) based on shunt active power filter (SAPF) provides an integrated protection for harmful currents and power ...

In recent years, there has been growing interest in new energy development due to concerns about environmental pollution and energy shortages. Lithium-ion batteries, known ...

For a given and applied system, effective utilization of drivetrain components mainly depends on precise determination of the present condition of the energy storage, which ...

In this study, a new aqueous rechargeable Na-ion battery system, which can store/release energy while operating in seawater and can also perform membrane-free ...

Multiple hybrid energy storage systems (multi-HESSs) consisting of batteries and supercapacitors (SCs) is widely used to share the requirement of system pulsating power, ...

Moreover, for new energy storage power stations, the safety and stability of the electric energy storage system components take precedence over the efficiency of energy supply.

Abstract: The increased demand of an intermediate storage of electrical energy in battery systems, in particular due to use of renewable energy, has resulted in the need of dual active ...

Stationary lithium-ion battery energy storage "thermal runaway," occurs. By leveraging patented

systems - a manageable fire risk dual-wavelength detection technology inside Lithium-ion ...

The accurate estimation of the state-of-charge (SOC) and state-of-health (SOH) of lithium-ion batteries is crucial for the safe and reliable operation of battery systems. In order ...

Electric vehicles (EVs) have become a vital solution for environmental transportation; however, challenges related to battery life and power density persist. In pursuit of enhanced EV ...

One possible use for it is to build a hybrid energy storage system (HESS). In HESS, the Energy Management Strategy (EMS) plays a vital role in ensuring optimal energy ...
