

How energy storage Supercapacitor box is made?

Finally, the energy storage supercapacitor box is manufactured using lightweight aluminum alloy material, and the fatigue damage of the aluminum alloy supercapacitor box is analyzed to provide a basis for the structural design optimization of the energy storage supercapacitor boxes.

How does a structure-Battery-integrated energy storage system work?

A structure-battery-integrated energy storage system based on carbon and glass fabrics is introduced in this study. The carbon fabric current collector and glass fabric separator extend from the electrode area to the surrounding structure.

What are the fatigue characteristics of energy storage Supercapacitor box?

The fatigue characteristics within the frequency domain under random vibrations defined by ASDs is analyzed. The maximum fatigue damage of the energy storage supercapacitor box is  $6.24 \times 10^{-6}$ . The number of fatigue cycles is on an order of  $10^5$ . Then the energy storage supercapacitor box is manufactured using lightweight aluminum alloy 6063-T5.

What is a structure-integrated energy storage system (SI-ESS)?

In this study, a structure-integrated energy storage system (SI-ESS) was proposed, in which composite carbon and glass fabrics were used as current collectors and separators, respectively, and they are placed continuously in the load path of the structure.

Does energy storage Supercapacitor box experience resonance?

The supercapacitor box will not experience resonance. The fatigue characteristics within the frequency domain under random vibrations defined by ASDs is analyzed. The maximum fatigue damage of the energy storage supercapacitor box is  $6.24 \times 10^{-6}$ . The number of fatigue cycles is on an order of  $10^5$ .

What is the fatigue life of aluminum energy storage Supercapacitor box?

The fatigue life of the supercapacitor box structure could meet the requirements for low stress high cycle life of urban rail vehicle components. (4) The maximum fatigue damage of the aluminum energy storage supercapacitor box is  $1.47 \times 10^{-4}$ , with a fatigue cycle life of about  $10^4$  times.
