However, the low energy density of dielectric ceramics compared to those of supercapacitors, fuel cells and Li-ion batteries limits its application. The development of ...

Among them, energy storage devices are of vital importance, such as large-scale energy recovery devices like solar energy, wind energy, and tidal energy, as well as small ...

As a consequence, the designed  $(1-x)\text{BT}-x(\text{BMO-Ta})$  ceramics exhibit dramatically enhanced energy storage properties including ultrahigh  $W_{\text{rec}}$  and efficiency (?), ...

Dielectric capacitors with high recoverable energy storage density ( $W_{\text{rec}}$ ) are in urgent demand for clean energy technologies. However, their lower breakdown strength ( $E_b$ ) strongly limits ...

Abstract Recently,  $\text{BiFeO}_3\text{-BaTiO}_3$  (BF-BT) lead-free ferroelectric ceramics have been widely concerned and deemed as one of the most promising candidates for lead-free energy-storage ...

Here, we studied the energy storage properties of PI composite films with  $\text{BaTiO}_3$  (BT) nanoparticles in a wide content range. Benefiting from the high breakdown strength (520 ...

Abstract Lead-free energy storage ceramic capacitors which have high-power density and ultrafast discharge time are widely used in electronic systems. However, lead-free ...
