

How do you remove dust from a photovoltaic module?

The main method of dust removal is manual or machine cleaning with water, but these methods have high costs and low cleaning efficiency [1,21,31]. It is worth noting that an improper cleaning process can cause mechanical and corrosive damage to photovoltaic modules. In areas where water is scarce, only mechanical methods can be used [79,80].

How does dust affect solar power production?

Semaoui et al. remarked that the accumulation of dirt and debris on the surface of solar panels can significantly reduce the short circuit current and overall power production of a photovoltaic (PV) system. As dust collects on the top of panels, natural cleaning methods such as rainfall and high-speed wind tend to increase power production.

Can a detachable electrodynamic cleaning system remove dust from photovoltaic panels?

Kawamoto, H. Improved detachable electrodynamic cleaning system for dust removal from soiled photovoltaic panels. J. Electrostat. 2020, 107, 103481.

Do self-cleaning coatings reduce dust deposition on PV modules?

By using self-cleaning coatings on PV modules, the removal efficiency of dust can be improved, and dust deposition can be partially prevented. However, current studies and reviews mainly focus on the effects and efficiency of self-cleaning coatings, while few studies emphasize the behavior and mechanism of dust deposition on them.

Do solar photovoltaic modules absorb dust?

Charged dust particles on photovoltaic modules will absorb dust particles in the air, resulting in more serious dust deposition [5,20,62]. Liu et al. studied the mechanism and properties of dust deposition on solar photovoltaic modules under electrostatic action. Figure 8 illustrates the principle and mechanism.

How does dust accumulation affect photovoltaic modules?

Overall, the impacts on dust accumulation of photovoltaic modules include: Particles with a diameter of 1-100 μm are most likely to be deposited on PV modules. It will promote the process of rebound and resuspension by increasing the incidence velocity.
