

How to install energy storage system?

The energy storage system must be installed on a structure supported by a concrete foundation or channel steel with a surface made of flame-resistant materials. The foundation must be smooth, solid, safe, reliable, and have sufficient load-bearing capacity. The foundation surface must not be sunken or inclined.

What is a CPS ES series energy storage system?

Keep the ESS away from flammable and explosive substances. CPS ES series energy storage systems are designed for use with commercial and large-scale on-grid/off-grid power systems. Details of CPS ES series configurations are shown in the following configuration table (Table 2-1).

What is the power range of energy storage PCs?

Operating DC voltage range with full power: 750-1100 V DC. Charging and discharging: Energy storage PCS can operate in grid-forming and grid-following modes. Both modes allow battery charging and discharging. The CPS ES series ESS implements a modular design concept.

Who is required to install and operate energy storage systems?

Personnel installing and/or operating the energy storage system **MUST BE** qualified electricians or those who have received professional training. Failure to follow the instructions in this manual and other relevant safety procedures could result in **DEATH** or **SERIOUS INJURY**. Installing electrical equipment and energy storage systems.

What should I know before servicing a CPS Es energy storage system?

Make sure hazardous high voltage and energy inside the equipment has been discharged before servicing. Never touch the live conductors, which can cause serious injury or death. The major components of the CPS ES series energy storage system are shown below.

What are the components of energy storage system?

The energy storage system consists of a bidirectional power converter PCS, a battery system, an energy management system EMS, and other equipment, as shown in Figure 2-1 below. When the system is discharging, DC power from the lithium batteries is converted into AC power by the PCS.
