

How to detect insulation resistance in a DC system?

Therefore, effective and timely insulation fault monitoring is critical to the safe operation of the system. Researchers have put forward various detection schemes for the insulation resistance detection of DC systems, which can be summarized as the direct measurement method, bridge balance method and signal injection method.

What are the methods used for insulation monitoring in energy storage field?

Currently, the methods used for insulation monitoring in the energy storage field are mainly external resistance method and AC injection method. The AC current injection method generates a square wave signal which is then injected into the RC circuit between the HV line and the Protective Earth (PE) through an RC filter or transformer.

Why is rapid detection of battery parameters important?

The rapid detection of battery parameters is widely used in battery production, market circulation, and maintenance of energy storage system.

What are the requirements for energy storage insulation monitoring?

Table 1-1. Requirements for Voltage, Current, Temperature, Insulation Resistance Accuracy in GB/T34131
Creepage distances and electrical clearances are also important areas of focus in the design of energy storage insulation monitoring.

How to detect insulation resistance based on signal injection?

Firstly, an insulation resistance detection scheme based on signal injection is designed. Then, an insulation resistance estimation algorithm based on the adaptive forgetting factor recursive least square (AFFRLS) algorithm is proposed, which uses fuzzy logic to adaptively correct the forgetting factor.

How to calculate ohmic internal resistance of a battery?

For the same step load excitation and different SOC, the transient response of the battery showed significant differences. According to the conventional treatment method, the quotient of voltage drop Δu_0 and current step change Δi_d between A (time 0, t_0) and B (time 0+, t_{0+}) can be used to calculate the ohmic internal resistance of the battery.
