

# Enterprise ESS system project financing options in Indonesia 2030

Can Singapore accelerate ESS development in Indonesia?

"The electricity export scheme to Singapore could be an opportunity to accelerate the country's adoption of ESS. With this project, energy storage capacity could increase to 33.7 GWH by 2030," he said. IESR recommends several important steps for the government to accelerate ESS development in Indonesia.

How much will Indonesia's energy system cost in 2021?

In the scenario in which the country's energy system relies on renewable energy, the IESR study on the Deep Decarbonisation of Indonesia's Energy System estimates that between 2021 and 2030, USD 20 to 25 billion per year will be required for investments.

Why is Indonesia focusing on energy transition and infrastructure development?

Despite global economic challenges, including rising interest rates, Indonesia's focus on energy transition and infrastructure development has opened up new opportunities- particularly in renewable energy, social impact projects, and digitalisation in financing mechanisms. Rise of green and sustainable financing

Can energy storage systems be deployed in Indonesia?

Tapping into the limited but existing opportunities for deploying energy storage systems (ESS) is vital for expanding their role in Indonesia's power sector. At present, the greatest potential for ESS deployment lies in smaller and/or isolated systems, as well as in industrial or large scale commercial solar rooftop PV with BESS.

What is the project financing landscape in Indonesia?

The project financing landscape in Indonesia continues to evolve, with a stronger emphasis on sustainability, regulatory improvements, and innovative financial structures. The market has seen a shift towards green energy projects, more defined local content requirements, and increased involvement from multilateral agencies.

Does Indonesia need more financing for green energy projects?

This highlights that much of the GSS+ bonds issued both by the government and private sector in Indonesia are primarily directed towards the energy sector. The evolving policy landscape in Indonesia further underscores the urgent need for increased financing in green energy projects.
