

Environmental assessment of all-vanadium liquid flow battery energy storage system

Are lithium-ion and vanadium flow batteries environmental burdens?

The life cycle of these storage systems results in environmental burdens, which are investigated in this study, focusing on lithium-ion and vanadium flow batteries for renewable energy (solar and wind) storage for grid applications.

Can vanadium flow batteries be reprocessed and reused?

In particular, the vanadium flow battery (VFB) is mentioned as a promising day storage technology. Nevertheless, its high cost and environmental impacts are attributed to its electrolyte. It is assumed that this issue can be addressed through reprocessing and reuse.

Is a vanadium flow battery a good choice for megawatt applications?

The vanadium flow battery (VFB) is an especially promising electrochemical battery type for megawatt applications due to its unique characteristics. This work is intended as a benchmark for the evaluation of environmental impacts of a VFB, providing transparency and traceability.

What is a vanadium flow battery (VFB)?

In the course of the energy transition, storage technologies are required for the fluctuating and intermittently occurring electrical energy. The vanadium flow battery (VFB) is an especially promising electrochemical battery type for megawatt applications due to its unique characteristics.

What is a vanadium flow battery with primary electrolyte?

The VFB with primary electrolyte serves as a benchmark. Relative changes in emissions of the vanadium flow battery with primary electrolytes compared to the vanadium flow battery with recycled electrolytes. Impact indicators: acidification potential (AP), global warming potential (GWP), human toxicity potential (HTP).

What are the components of a vanadium flow battery?

The first group is the stack, which includes all electrochemical cell components. The module energy storage comprises the vanadium electrolyte and the storage tanks. The module support covers all components needed for the balance of plant. The last group is the foundation. Main components of a 1 MW - 8 MWh vanadium flow battery with mass balance
