

Should deflagration venting be used as passive explosion protection?

In general, using deflagration venting as passive explosion protection in addition to an active system has multiple benefits due to the nature of the battery failure event, which involves a rapid release of flammable gases.

Do explosion vent panels reduce explosion overpressure?

With the increasing utilization of explosion vent panels for gas explosion protection, relevant research has begun to emerge. Bauwens conducted experiments on venting hydrogen concentrations ranging from 12 % to 19 % in a rectangular space, analyzing the relationship between venting area and reduced explosion overpressure.

How does ESS design affect fire and explosion safety?

Several competing design objectives for ESS can detrimentally affect fire and explosion safety, including the hot aisle/cold aisle layout for cooling efficiency, protection against water and dust ingress into the enclosure, and the use of larger cells with increased energy density.

Can passive protection be used as a sole explosion protection scheme?

The two main challenges in using passive protection methodology are design constraints for the enclosure and lack of validation data to support calculation methodology. These challenges make it difficult to obtain a feasible design for deflagration venting of ESS enclosures as the sole explosion protection scheme for most configurations.

Does NFPA 855 require explosion protection?

The fire codes (IFC 2021 Chapter 1207, NFPA 855 ed. 2023) contain a requirement to include explosion protection for installed systems exceeding certain energy capacity thresholds.

Does explosion intensity affect venting efficiency of explosion vent panels?

A test system utilizing hydrogen as the explosion source is constructed, and the opening process is recorded using high-speed cameras. The conclusions are as follows: The venting efficiency of explosion vent panels varies under different explosion intensities. With increasing explosion intensity, the venting efficiency shows a decreasing trend.
