

Can battery energy storage improve frequency modulation of thermal power units?

Li Cuiping et al. used a battery energy storage system to assist in the frequency modulation of thermal power units, significantly improving the frequency modulation effect, smoothing the unit output power and reducing unit wear.

What is dynamic frequency modulation model?

The dynamic frequency modulation model of the whole regional power grid is composed of thermal power units, energy storage systems, nonlinear frequency difference signal decomposition, fire-storage cooperative fuzzy control power distribution, energy storage system output control and other components. Fig. 1.

What is the frequency modulation of hybrid energy storage?

Under the four control strategies of A, B, C and D, the hybrid energy storage participating in the primary frequency modulation of the unit Δf_m is 0.00194 p.u.Hz, excluding the energy storage system when the frequency modulation Δf_m is 0.00316 p.u.Hz, compared to a decrease of 37.61 %.

Can MATLAB/Simulink verify a thermal power unit primary frequency modulation model?

Model verification A previous article based on theoretical research built a hybrid energy storage system-assisted thermal power unit primary frequency modulation model in MATLAB/Simulink. The rated power of the thermal power unit is 600 MW, and the relevant parameters are per unit value.

How does a hybrid energy storage system affect frequency regulation?

In practice, the frequency fluctuation of a unit is generally caused by continuous and irregular load fluctuations, therefore, simulate the impact of coupling a hybrid energy storage system and a single energy storage system on the primary frequency regulation of thermal power units under continuous disturbances.

What is the time scale of frequency modulation?

In the frequency modulation process of power system, the time scale of a frequency modulation adjustment is second level and below, the frequency fluctuation of the period below 10 s is mainly suppressed by the governor and the inertia of the system, and the time constant of the filter should be ≤ 10 s.

In the end, a control framework for large-scale battery energy storage systems jointly with thermal power units to participate in system frequency regulation is constructed, and the proposed ...

Compared with the separate frequency modulation of thermal power, the maximum frequency deviation of wind power, energy storage, and flexible direct current participating in frequency ...

To mitigate the system frequency fluctuations induced by the integration of a large amount of renewable
