Will energy storage growth continue through 2025?

With developers continuing to add new capacity, including 9.2 GW of new lithium-ion battery storage capacity in 2024 through November 2024 and comparable levels of growth expected through the fourth quarter of 2024, energy storage investments and M&A activity are expected to continue this trajectory through 2025.

Do energy storage systems cover green energy plateaus?

Energy storage systems must develop to cover green energy plateaus. We need additional capacity to store the energy generated from wind and solar power for periods when there is less wind and sun. Batteries are at the core of the recent growth in energy storage and battery prices are dropping considerably.

Are batteries the future of energy storage?

Batteries are at the core of the recent growth in energy storage and battery prices are dropping considerably. Lithium-ion batteries dominate the market, but other technologies are emerging, including sodium-ion, flow batteries, liquid CO<sub>2</sub> storage, a combination of lithium-ion and clean hydrogen, and gravity and thermal storage.

How has the IRA impacted the energy storage industry?

The energy storage industry has continued to progress over the course of 2024 and into 2025, buoyed in significant part by the federal income tax benefits in the form of tax credits enacted under the IRA. Energy storage was one of the major beneficiaries of the IRA's new rules on both the deployment and manufacturing sides.

How does energy storage work?

Energy storage creates a buffer in the power system that can absorb any excess energy in periods when renewables produce more than is required. This stored energy is then sent back to the grid when supply is limited.

Can energy storage solve intermittency issues?

According to Robert Piconi, Chief Executive Officer of Energy Vault, "With clean energy rapidly gaining momentum, we are seeing heightened demand for energy storage infrastructure to solve for intermittency issues. There is no one-size-fits-all solution as far as energy storage is concerned.
