How big is the NMC battery market?

The U.S. NMC battery market is projected to exceed USD 35.2 billion by 2034, led by federal and state incentives, stricter emission regulations, and the push for energy grid modernization and renewable energy integration. What is the size of the automotive segment in the NMC battery market?

Does a battery supply chain have a vulnerability?

NMC has additional risks due to concentrations of nickel, cobalt, and manganese in other countries. The combined vulnerability of multiple supply chain stages is substantially larger than at individual steps alone. Our results suggest that reducing risk requires addressing vulnerabilities across the entire battery supply chain.

Why did Indian nickel price decline in 2024?

For instance, in 2023, The Ministry of Mines, India and Mineral Security Partnership (MSP) partnered to ease supply of minerals such as Nickel and Cobalt. Such factors promote self sufficiency of the nation for exploration and supply of nickel and cobalt. This aided Indian nickel price declining in 2024.

Are NMC cathodes vulnerable to disruptions in China?

World supply is currently vulnerable to disruptions in China for both chemistries: 80% [71% to 100%] of NMC cathodes and 92% [90% to 93%] of LFP cathodes include minerals that pass through China. NMC has additional risks due to concentrations of nickel, cobalt, and manganese in other countries.
