

A novel ground source heat pump (GSHP) system integrated with underground thermal energy storage (UTES) has been proposed to level the electric demand of buildings ...

The Earth's total heat content is estimated to be about 10^{31} J and the current average global terrestrial heat-flux rate is 44 TW (1.4×10^{21} J yr⁻¹, Dickson and Fanelli 2004). Divided by the ...

Thermal Battery Storage Source Heat Pump Systems store that energy by melting ice for cooling while using less fan energy. This makes the energy extracted from the building (while cooling) ...

To address the challenges of low solar energy utilization, soil temperature imbalance, and excessive energy consumption in traditional heating systems, a novel solar ...

In order to solve the problem of the soil heat imbalance due to the year-round operation of the solar-ground source heat pump in regions with the large gap between cooling ...

Alignment and Impact: TES-ready HP as Decarbonization Solution Affordability TES-ready heat pump reduces first and operating cost by "right-sizing" heat pumps and Equity and avoiding ...

Furthermore, different from air-source heat pumps, the ground-coupled ones can perform energy storage in the ground (or water), thus providing an additional benefit to clean heating strategies.

Abstract. Ground source (geothermal) heat pumps (GSHPs) can meet the thermal demands of buildings in an energy-efficient manner. The current high installation costs ...

Heat pumps are devices that use electricity or other energy sources to extract heat from a low-temperature source (such as the air, ground, or water) and transfer it to a high ...

Highlights
o Designed a new combined heating system of solar energy and ground source heat pump for an oilfield hot water station.
o Effects of latent heat storage tank ...

This paper describes a study of an experimental Solar Assisted Ground Source Heat Pump (SAGSHP) system for domestic heating applications. The system uses an array of ...

Solar-assisted ground source heat pump systems are an alternative to mitigate the ground thermal imbalance by injecting solar thermal energy into the ground to balance energy ...

This review comprehensively studies the development and applications of cement-based grout, vertical ground heat exchangers (GHE), and horizontal GHE in relation to ...

Borehole Thermal Energy Storage (BTES), where no fluid is physically exchanged with the ground, but where the volumetric heat capacity of the rock alone is used to store heat.

The solar assisted ground source heat pump system (SAGSHP) is recognized as an efficient, clean and economical renewable energy technology for hot water supply. ...

The integrated use of multiple renewable energy sources to increase the efficiency of heat pump systems, such as in Solar Assisted Geothermal Heat Pumps (SAGHP), ...
