

Can dynamic ice storage improve energy flexibility in subtropical climates?

This paper introduces an innovative dynamic ice storage system based on ice slurry designed to shift electricity demand and improve energy flexibility for consumers in subtropical climates, thereby reducing energy consumption and contributing to decarbonization.

What is a continuous field test of dynamic ice storage system?

The continuous field test was carried out on the dynamic ice storage system of the case building in April, to obtain the night ice charge energy capacity, daytime ice discharge energy capacity, and energy efficiency of the system. This test is based on the Method of testing the performance of cool storage systems (GB/T 26194-2010).

What is dynamic ice energy storage technology?

The dynamic ice energy storage technology is originated from the Fourier's law. The basic formula for heat conduction is as follow in Eq. (1), which indicates that the amount of heat exchange per unit time is proportional to the thermal conductivity.

What is the energy balance of dynamic ice storage systems?

While the energy balance primarily focuses on the active charging and discharging phases of the dynamic ice storage system, potential standing losses (e.g., thermal dissipation and idling losses) were not explicitly measured or modeled due to data limitations.

Is dynamic ice storage more energy-efficient than traditional cooling systems?

The proposed system was implemented in a high-rise office building in southern China and analyzed through energy, environmental, and economic perspective. On-site measurements demonstrate that the dynamic ice storage system is significantly more energy-efficient and has lower carbon emissions than traditional cooling systems.

Does ice slurry storage reduce electricity cost?

The findings indicate that the electricity cost of the with-ice slurry storage system is significantly lower, amounting to less than half of the total cost incurred by the conventional one. Zhang et al. proposed an enhanced vacuum cooling system using ice slurry storage.
