What is the installed power capacity of Liberia?

Recently, Liberia's installed electricity capacity reached ~200 MW. Most of this capacity comes from HFO and diesel power plants, with limited contributions from hydroelectric and biomass sources. Fig. 2 provides an overview of the installed capacity trend available as an alternative to the grid-based approach and the needs they meet. Fig. 2.

What are the main energy sources in Liberia?

The primary energy sources in Liberia are traditional biomass fuels such as firewood and charcoal, which account for more than 80 % of the country's total energy consumption [5,12,13]. Petroleum products, including gasoline and diesel, account for about 10 % of energy consumption, while hydroelectric power accounts for just over 6 %.

Will Liberia get a 20 MW power supply in 2020?

In addition, the government signed a Power Purchase Agreement with a solar energy company to provide the country ≥ 20 MW of electricity in 2020. Despite these efforts, much work remains to be done to improve access to reliable and affordable energy in Liberia.

How much solar power does Liberia have?

According to estimates by the World Bank Group, Liberia has a solar potential of ~5.4 kWh/m² per day, with up to 6.5 h of sunshine per day on average. Similarly, Liberia has considerable hydroelectric power potential due to its numerous rivers and other resources.

What are the challenges to energy access in Liberia?

The primary challenge to energy access in Liberia is the limited and underdeveloped energy infrastructure. The lack of adequate power generation, transmission, and distribution systems contributes to this low access rate. The electrification rate is significantly lower in rural areas, where most of the population resides.

How can Liberia reduce its dependency on imported fuels?

To overcome these challenges, Liberia has been exploring alternative solutions to reduce its dependency on imported fuels for thermal power generation. One strategy is to diversify the energy mix by increasing the share of domestic renewable energy sources, such as solar and wind power, for electricity generation.
