What is return energy storage?

At Return, we are committed to revolutionizing energy storage to accelerate the transition to clean energy. Our mission is to own and provide large-scale energy storage systems that deliver flexible, smarter, and more efficient power solutions.

Why do we need energy storage systems?

As a consequence, the electrical grid sees much higher power variability than in the past, challenging its frequency and voltage regulation. Energy storage systems will be fundamental for ensuring the energy supply and the voltage power quality to customers.

Do energy storage systems ensure a safe and stable energy supply?

As a consequence, to guarantee a safe and stable energy supply, faster and larger energy availability in the system is needed. This survey paper aims at providing an overview of the role of energy storage systems (ESS) to ensure the energy supply in future energy grids.

What is return energy?

Return. energy. We envision a world where every renewable electron is preserved, powering a sustainable and resilient future. At Return, we are committed to revolutionizing energy storage to accelerate the transition to clean energy.

Why do energy storage systems need a DC connection?

DC connection The majority of energy storage systems are based on DC systems (e.g., batteries, supercapacitors, fuel cells). For this reason, connecting in parallel at DC level more storage technologies allows to save an AC/DC conversion stage, and thus improve the system efficiency and reduce costs.

What is long-term energy storage (LDEs)?

One of the major concern is to supply power during periods where both solar and wind power are not available. Long-term storage (i.e., with a discharge time at nominal power more than 10 h) plays a vital role. Long Duration Energy Storage (LDES) solutions can be divided in two categories .
