

How to trade the energy storage industry index

What is energy trading?

Energy trading involves the buying and selling of various energy commodities to take advantage of price changes. With us, you can trade oil, natural gas and other energy commodities. Learn more about energy trading. What's on this page?

How to trade energy commodities?

Spot prices, futures and options are three ways to trade energy commodities. You can use a contract for difference (CFD) trading account to trade all of these. When trading using CFDs, you don't take ownership of the asset but rather take a position on the direction of the underlying asset's price.

Are energy storage systems in demand?

Energy storage systems are increasingly in demand to increase the effectiveness of solar power arrays, with the Energy Information Administration estimating in February that new utility-scale electric-generating capacity on the U.S. power grid will hit a record in 2025 after a 30% increase over the prior year.

How to trade energy products?

Several strategies can be used to trade energy products. These include those based on fundamental analysis and evaluating supply and demand or measuring one energy product versus another. A complementary approach uses price data and metrics in the form of technical analysis.

Who trades energy products?

Two main groups trade energy products. The core trading activity is between oil producers and refiners and users of the finished product, such as airlines, electricity suppliers and chemical manufacturers.

What factors affect energy shares?

Energy shares are similarly impacted by macroeconomic and geopolitical factors, but share prices are also affected by earnings reports. Further, changes in market sentiment can have a large impact on the prices of less liquid assets like shares. In general, larger assets like energy commodities are more liquid and less volatile.
