

How to use the intelligent energy storage soft switch

What is the Energi Savr node with softswitch module?

The Energi Savr Node with Softswitch module can be used to switch third-party ballasts and other non-dim loads, as well as connect wired and wireless occupancy/vacancy sensors, daylight sensors, and wallstations to manage light in a variety of spaces.

Can Lutron's wireless sensors be installed in a softswitch system?

Can be installed in accordance with National Electrical Code's (NEC's) Article 300.22(c) "Other spaces used for environmental air" Design statement: Add a QS sensor module to integrate Lutron's wireless and wired sensors and controls in an Energi Savr Node with Softswitch system.

How can Energi Savr save energy?

Energy-saving light control strategies implemented using the Energi Savr Node™ with Softswitch's module can save up to 40% of the lighting energy used in your building. Turn lights off when space is unoccupied; turn lights on 100% when someone enters.
