Will fossil fuel costs affect electricity prices in Norway in 2040?

Electricity prices remain strongly affected by fossil fuel costs to 2040. The 2040 power price in Norway is modelled to be 39 &#177; 4 EUR/MWh. Market value of Norwegian hydropower is 34% higher than the average power price. Seasonal patterns for solar PV give &lt;3% probability of revenues higher than the LCOE.

Is solar PV a good option for the future Norwegian power market?

Solar PV has an average market value as low as 20 &#177; 3 EUR/MWh. Despite low LCOE estimates, solar PV does not look like an attractive option for the future Norwegian power market, given our model assumptions.

How much electricity does Norway produce in 2021?

In 2021, Norway had an electricity production of 157 TWh, of which 91% was from hydropower, 8% from onshore wind, and &lt;1% from thermal sources (NVE, 2021b). This shows that the Norwegian generation mix is already dominated by renewable energy. In normal weather years, Norway exports around 19 TWh of electricity to neighbouring countries.

What is the power price in Norway in 2040?

The 2040 power price in Norway is modelled to be 39 &#177; 4 EUR/MWh. Market value of Norwegian hydropower is 34% higher than the average power price. Seasonal patterns for solar PV give &lt;3% probability of revenues higher than the LCOE. On/offshore wind has a 50%/1% probability of having revenues higher than the LCOE.

Are hybrid solar systems worth it?

Hybrid systems can provide whole-house backup power, but this requires larger battery capacity and higher-powered inverters, significantly increasing costs. Most homeowners choose to back up only essential circuits (critical loads) to balance cost and functionality. Are hybrid solar systems safe?

Will high electricity prices limit consumption growth in Norway?

However, growth assumes that electricity prices are low enough. Without new Norwegian electricity production, excluding the projects that are currently under development, high electricity prices will practically limit consumption growth to an estimated 25-30 TWh.
