

Can a DC-DC converter transfer energy between a battery and a bus?

In the present paper, a novel high-efficiency isolated DC-DC converter is proposed for an energy storage system. This converter can transfer energy between a battery and a DC bus.

What is a DC-DC converter in a distributed generation system?

Figure 1. Configuration of a distributed generation system with an energy storage system. In an energy storage system, a DC-DC converter is required to transfer energy between a battery and a DC bus. DC-DC converters are of two main types: isolated converters and nonisolated converters.

What are isolated DC-DC converters?

Isolated DC-DC converters can be categorized not only based on their power handling capability but also considering their scalability, flexibility, modularity, efficiency, cost, and reliability. In addition, they enhance immunity to noise and interference, fault tolerance, and most importantly, ease of voltage conversion.

Can a bidirectional DC-DC converter be used for battery charging and discharging?

In this paper, a novel high-efficiency bidirectional isolated DC-DC converter that can be applied to an energy storage system for battery charging and discharging is proposed. By integrating a coupled inductor and switched-capacitor voltage doubler, the proposed converter can achieve isolation and bidirectional power flow.

What is an isolated DC-DC forward converter?

In industrial applications and motor drives, isolated DC-DC forward converters are commonly chosen due to their excellent voltage regulation and high efficiency. As illustrated in Figure 6 a, similar to the flyback converter, the forward converter is classified as a single-ended topology, and a single active switch, S_1 , is considered.

What is a multiport isolated DC-DC converter?

The need for integrating emerging technologies has driven the adoption of multiport isolated DC-DC converters in distributed generation systems. Variants such as the DHB, SAB, and DAB provide highly flexible solutions, enabling optimized control over the magnitude and direction of bidirectional power flow.
