Where is the first battery energy storage system in Latvia?

On November 1 Latvia's largest wind energy producer Utilitas Wind opened the first utility-scale battery energy storage battery system in Latvia with a total power of 10 MW and capacity of 20 MWh in Targale, Ventspils region.

Does Latvia have a natural gas storage facility?

Latvia's large underground Incukalns natural gas storage facility has proven instrumental in bolstering regional security of supply across the region following a ban on Russian gas imports in 2022.

Are new wind farms a good investment for Latvia's energy security?

I am pleased that the bar has been set high for developers of new wind farms, which also plays an important role in the context of Latvia's energy security," said Climate and Energy Minister of Latvia, Kaspars Melnis. Given the total investment in the project, the OP Corporate Bank provided loan financing.

How do you calculate the storage capacity of a latent heat energy storage system?

After extensive research by many scholars, it has been found that the storage capacity of a latent heat energy storage system with phase change materials is given by the following equation : (1)  $Q = T I T m m C p dT + m a m ? H m + ? T m T f m C p dT$

What is a phase change thermal energy storage system (PCM)?

In phase change thermal energy storage technology, PCMs play a crucial role in determining the performance of the energy storage system. Researching and finding safe, reliable, high energy density, and high-performance PCMs is key to the advancement of phase change thermal energy storage technology. 2.2. Principles for selecting PCMs

How can a latent heat storage system improve heat transfer efficiency?

According to Eq. (1), the storage capacity of a latent heat storage system is closely related to the thermal properties of the phase change material (PCM). This indicates that enhancing the system's heat transfer efficiency should start from improving the thermal properties of the PCM.

The Science Made Fun Think of phase change materials (PCMs) as the "Goldilocks" of energy storage--they're picky about temperatures but perfect at holding heat. ...
