

Which countries import lithium-ion batteries?

Lithium-ion batteries power various technologies, from smartphones to electric vehicles and grid storage. China dominates the global lithium battery supply chain, producing over 75% of the world's lithium-ion battery cells. The U.S. imports nearly 70% of its lithium batteries from China, making tariffs on these products highly impactful.

How will US tariffs affect Chinese lithium batteries in 2025?

U.S. tariffs on Chinese lithium batteries have become a critical factor shaping the global battery market in 2025. These tariffs directly impact lithium-ion batteries' cost, supply chain, and competitiveness, essential for electric vehicles (EVs), renewable energy storage, and consumer electronics.

What is the US tariff policy on lithium ion batteries?

In April 2025, the U.S. government updated its tariff policy on lithium-ion batteries imported from China. The current tariff structure includes: A 3.4% global tariff on lithium-ion batteries, regardless of origin. A Section 301 tariff targeting Chinese imports, currently at 7.5%, is scheduled to rise to 25% by January 2026.

What is the tariff landscape for lithium-ion LiFePO<sub>4</sub> battery imports from China to USA?

Current Tariff Landscape for Lithium-ion LiFePO<sub>4</sub> Battery Imports from China to USA is a complex mix of tariffs. As of April 2025, total tariffs range from about 70% to over 170% depending on battery type and classification.

Will China impose tariffs on lithium-ion EV batteries?

An interesting issue will be the imposition of tariffs. There are existing tariffs pursuant to Section 301 of the Trade Act of 1974 on some Chinese-origin lithium-ion EV batteries and non-lithium-ion battery parts, which were increased to 25% in September 2024.

Do China import Li-ion storage batteries?

China exported \$10.8 billion of Li-ion storage batteries to the United States in 2023, accounting for 72 percent of all US imports of the product. Chinese imports are particularly important in the storage market. These li-ion storage batteries are useful for decarbonizing the US power sector and complementing solar generation.

With EVs not set to be affected by the reciprocal and universal tariffs, the focus turns to the second largest battery demand market in the US, energy storage. In 2024, over ...

Trump's battery tariffs threaten utility-scale storage and US grid reliability. The tariffs will not only affect procurement costs but could force utilities to turn back to natural gas ...

The U.S. is now importing large volume of lithium-ion battery to meet demand from domestic EV

manufacturing and energy storage connected to the power grid for ...

U.S. tariffs on Chinese lithium batteries have become a critical factor shaping the global battery market in 2025. These tariffs directly impact lithium-ion batteries' cost, supply ...

Introduction to Importing Lithium Batteries to Iraq Lithium batteries are becoming essential for Iraq's expanding energy and technology sectors. As the country pushes toward ...

The tariffs affect a range of clean energy imports including EVs, solar PV, battery energy storage, and inputs for these. This briefing focuses on the tariffs affecting battery energy storage. Policy ...

Advanced Lithium-Ion Energy Storage Battery Manufacturing in the United States Due to increases in demand for electric vehicles (EVs), renewable energies, and a wide ...
