

# Main indicators of energy storage stations

How can energy storage power stations be evaluated?

For each typical application scenario, evaluation indicators reflecting energy storage characteristics will be proposed to form an evaluation system that can comprehensively evaluate the operation effects of various functions of energy storage power stations in the actual operation of the power grid.

Which energy storage power station has the highest evaluation Value?

Calculation results of relative closeness. According to the evaluation values of the operational effectiveness of various energy storage power stations, station F has the highest evaluation value and station C has the lowest evaluation value.

How do energy storage power stations use peak function?

To fully utilize the peak function of the energy storage power stations, constant power rate mode is used during charging and discharging, and larger power is used during discharging).

How do you rank energy storage power stations?

Rank the energy storage power stations based on their relative closeness degree  $C_i$ . The closer  $C_i$  is to 1, the closer it is to a positive ideal solution, and the higher it is in the ranking of advantages and disadvantages.

4.3. Processes for evaluating the operational effectiveness of energy storage power stations

Why is energy storage important?

Energy storage is one of the key technologies supporting the operation of future power energy systems. The practical engineering applications of large-scale energy storage power stations are increasing, and evaluating their actual operation effects is of great significance.

What are the applications of grid side energy storage power stations?

Further research directions Due to the important application value of grid side energy storage power stations in power grid frequency regulation, voltage regulation, black start, accident emergency, and other aspects, attention needs to be paid to the different characteristics of energy storage when applied to the above different situations.
