

Can a nanosecond pulse generator achieve high voltage gain?

The paper proposed a new type boost nanosecond pulse generator with extremely high-voltage gain. The principle of inductance energy storage for the transmission line and the method of a variable-impedance transmission line transformer boost are proposed to achieve higher voltage gain.

What is a boost high-voltage nanosecond pulse generator?

In the article, a new type boost high-voltage nanosecond pulse generator is proposed. The distributed inductance of the transmission line is utilised as the energy storage unit and cooperated with the variable impedance transmission line transformer to generate nanosecond pulses with extremely high-voltage gain.

What is a high-voltage nanosecond pulse generator (hvnp)?

Recent years, high-voltage nanosecond pulse generators (HVNPG) have been widely used in industrial or medical fields [1, 2], such as atmospheric pressure low-temperature plasma , electrical tumour ablation [4, 5] and other high-voltage pulse applications.
