Is photovoltaic remuneration mandatory?

Benefiting from the FiT, it is mandatory for all the energy generated under the Special Regime in countries with the highest photovoltaic power potential.<sup>2</sup> Still, photovoltaic (PV) For new small-scale projects, a remuneration regime came into action in 2015. This regime is based on a bidding model, in which producers offer discounts to a

Does distributed solar energy reduce technical losses?

and hour, and for both utility-scale and residential installations. Then, we explain<sup>5</sup> According to Borenstein (2008), even though distributed solar energy may result in reduced technical losses, grid engineers argue that the intermittent character of distributed generation and the reverse flow from customers may increase

What is photovoltaic self-consumption?

Photovoltaic self-consumption is the process of generating electricity directly from sunlight through solar panels, which offers a promising avenue for energy independence. This not only reduces reliance on the grid but also significantly cuts down electricity bills.
