

Can artificial intelligence control energy management PV systems?

Fig. 11 provides a schematic representation of the suggested artificial intelligence control of energy management PV systems. A photovoltaic (PV) generator, a battery management system (BMS), a boost converter, and an alternating current (AC) load fitted with a neurofuzzy control system make up the primary elements of the power system.

How can an ANN control the energy management of PV systems?

The energy management of PV systems is an important issue when studying renewable energy. One of the methods to control this process is by using an ANN. ANN-based controllers are gaining popularity due to their ability to adapt to different scenarios and enhance energy conversion efficiency.

What is a solar PV system?

It is the system directly connected to the electricity grid. It consists of PV panels, one or more inverters, a distribution panel, an electric load, a meter, and an electricity network. The solar photovoltaic (SPV) cell converts solar energy into electrical energy. Electricity can be defined as the flow of electrons.

What is a PV-battery-fuel cell system control strategy?

The authors suggested a PV-battery-fuel cell system control strategy. The approach uses the phasor feasible alternative from advanced power systems to provide design assessment. The control strategy uses a genetic algorithm (GA) and an adaptive neurofuzzy inference system (ANFIS) in this approach.

Why do solar power systems need a static converter?

Renewable energy systems, such as photovoltaic (PV) systems, have become increasingly significant in response to the pressing concerns of climate change and the imperative to mitigate carbon emissions. When static converters are used in solar power systems, they change the current, which uses reactive energy.

How can photovoltaic and wind systems achieve maximum power?

The maximum possible power of the photovoltaic and wind systems can be achieved thanks to the proposed MPPT technique, which has shown good results compared with the techniques mentioned in the literature.

The main challenge associated with wind and solar Photovoltaic (PV) power as sources of clean energy is their intermittency leading to a variable and unpredictable output [1, ...

This paper proposes an energy management strategy (EMS) for a hybrid stand-alone plant destined to supply controllable loads. The plant is composed of photovoltaic panels ...

In high renewable penetrated microgrids, energy storage systems (ESSs) play key roles for various

functionalities. In this chapter, the control and application of energy ... With the large ...

Potential research topics on the performance analysis and optimization evaluation of hybrid photovoltaic-electrical energy storage systems in buildings are identified in aspects of ...

The autonomous photovoltaic system requires a battery for storage of energy, for consumption during the night and days with low irradiation. This article presents the design and control of ...

The growing global demand for sustainable and clean energy has propelled international research into solar photovoltaic (PV) systems with more advanced designs. Solar ...

Abstract In autonomous microgrids frequency regulation (FR) is a critical issue, especially with a high level of penetration of the photovoltaic (PV) generation. In this study, a ...

PV/wind/battery energy storage systems (BESSs) involve integrating PV or wind power generation with BESSs, along with appropriate control, monitoring, and grid interaction ...

This study presents a novel voltage control strategy for low voltage (LV) distribution grids, addressing the lack of coordination between photovoltaic (PV) reactive ...

In this strategy, the energy storage unit implements maximum power point tracking, and the photovoltaic inverter implements a virtual synchronous generator algorithm, ...

Abstract In this paper, development and simulation of photovoltaic (PV), solid oxide fuel cell (SOFC) and battery energy storage system (BESS) based microgrid is presented.

Control of High-Energy High-Power Densities Storage Devices by Li-ion Battery and Supercapacitor for Fuel Cell/Photovoltaic Hybrid Power Plant for Autonomous System ...

Photovoltaic-thermoelectric generator (PV-TEG) is a hot way to enhance full-spectrum utilization and improve energy conversion efficiency. However, the fluctuation of energy input in actual ...

Self-adaptive virtual synchronous generator (SDVSG) controlled grid-connected inverters can provide virtual damping and inertia to support the frequency and voltage of the ...

General FlexPower Concept The main research objective of this project is to provide the industry with an answer and a solution to the following question: How can hybrid plants consisting of ...

What are autonomous energy grids (AEGs)? To handle this highly distributed energy future, we propose the concept of autonomous energy grids (AEGs). AEGs are multilayer, or hierarchical, ...
