

Can solar energy be stored for 18 years?

A series of research papers offer hope though, as they outline a novel approach to storing the sun's energy. In 2018, scientists in Sweden developed "solar thermal fuel," a specialized fluid that can reportedly store energy captured from the sun for up to 18 years.

How does a solar thermal energy storage system work?

The fluid has been in development for more than a year by scientists from Chalmers University of Technology in Sweden. The solar thermal collector named MOST (Molecular Solar Thermal Energy Storage System) works in a circular manner. A pump cycles the solar thermal fuel through transparent tubes.

Can solar energy be stored if the Sun is not shining?
