

# Successful bid price of utility scale ESS project in Peru 2025

What happened to ESS bid prices in March 2024?

In March 2024, ESS bid prices varied depending on their storage capacity, with an overall downward trajectory evident, particularly in the case of four-hour ESS bids, which hit yet another all-time low. Raw material prices for storage battery are expected to remain stable. At the outset of 2024, battery prices experienced a decline.

Why do we use a single cost for 2024?

Although there is uncertainty in the 2024 cost (which is discussed later), we use a single cost for 2024 for convenience as we apply these costs in our long-term planning models (applying the same costs in 2024 means that the 2024 solution will not change as we shift from a "high" to a "mid" to a "low" cost projection for storage).

What is the price gap between ESS and batteries?

In March, the price disparity between ESS and batteries has continued to shrink. The average price of a 280Ah/0.5C storage battery hovered around 0.38 yuan/Wh in March 2024. According to our data, the average winning price for a 2-hour ESS is approximately 0.63 yuan/Wh, resulting in a price gap of around 0.25 yuan/Wh.

In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems.
