

Is energy storage regulated?

Whilst the Department of Business, Energy & Industrial Strategy ("BEIS") and Ofgem have been supportive of energy storage and recognise the benefits and flexibility provided by the various technologies, there is no specific legislation or regulation of storage at present.

What is the European Commission doing about energy storage?

The European Commission in 2020 published a study on energy storage, which summarized some previous studies and reports, explored current and potential energy storage markets in Europe, and set out policy and regulatory recommendations for energy storage.

How will the infrastructure planning (electricity storage facilities) order 2020 impact business?

"The Infrastructure Planning (Electricity Storage Facilities) Order 2020 and this instrument's annualised net impact on business is an estimated net £1.5 million equivalent annualised direct savings, below the indicative £5 million threshold for significant impacts.

Are electricity storage facilities a generating station?

In the planning regime electricity storage facilities are treated as a form of generating station and prior to this legislation coming into force were subject to the 50MW capacity threshold for the Nationally Significant Infrastructure Projects regime.

Who commissioned the energy storage health and safety guidance?

The Department for Energy Security and Net Zero commissioned this guidance on behalf of the industry-led Electricity Storage Health and Safety Governance Group. Frazer-Nash Consultancy was selected to undertake the project. Is this page useful?

What are EU energy storage initiatives?

EU energy storage initiatives are a key part of advancing energy security and the transition toward a carbon-neutral economy, improving energy efficiency, and integrating renewable energy sources into electricity systems, and can play an integral role in balancing power grids and saving surplus energy.

Root-Power powers forward with a groundbreaking 50-MW battery storage project in Glasgow, paving the way for sustainable energy and six more UK installations by 2026!

But here's the kicker - storing that energy is becoming Britain's new superpower. With over 17GWh of storage projects set to connect to the grid in 2025 alone [3], ...

The changes to planning legislation for larger energy storage projects were first announced back in October

2019 to allow planning applications to be determined without going through the ...

The UK government announced in October last year plans to implement a "cap and floor" investment framework to support the deployment of long-duration energy storage (LDES) ...

The Energy Act 2023 (the " Act ") introduced key measures for supporting the UK's hydrogen economy, including (amongst others) setting out the regulatory framework for ...

Introduction Introduction of the revenue support business models for both low carbon hydrogen projects and carbon capture and storage (CCS) projects are some of the key measures ...

Whate are the key site requirements for Battery Energy Storage Systems (BESS)? Learn about site selection, grid interconnection, permitting, environmental ...

This health and safety guidance for grid scale electricity storage, including batteries, aims to improve the navigability and understanding of existing standards.

This is being made alongside The Infrastructure Planning (Electricity Storage Facilities) Order 2020 which removes the need for electricity storage, except pumped hydro, to seek consent ...

Guarantees of Origin (REGO), and Smart Export Guarantee (SEG) schemes who are considering co-locating electricity storage facilities with their accredited RO or REGO generating station, ...
