

We are mainly engaged in Portable Energy Storage Power Supply, Solar Energy Power System, and UV-C LED lighting optical materials R& D, modification, production and application.

Dive into the world of UV coating battery cells, a groundbreaking innovation that is reshaping energy storage. This article explores the benefits, technology, and potential future applications ...

Extensive research has been conducted on visible-light and longer-wavelength infrared-light storage phosphors, which are utilized as promising rewritable memory media for optical ...

Ethylene degradation via vacuum ultraviolet photolysis: nth-order kinetic model, energy consumption assessment, and a case study for "Fuji" apples under retail conditions

The application of ultraviolet (UV) light in the food industry has held great promise for a long time. UVC light (200-280 nm) possesses excellent germicidal properties to inactivate ...

AlN ceramics, untreated and subjected to oxygen ion implantation, are studied for potential application in TL dosimetry of UV light. Based on photoluminescence and thermoluminescence ...

In the future, UV-curing 3D printing technology may bring a revolution in the field of shape-stabilized phase change energy storage and will be applied to advanced thermal ...

In this Review, various classes of molecular photoswitches triggered with visible light are reported together with their applications in phototriggered smart materials - polymers, hydrogels, ...

Thermo-set membranes prepared by UV-induced free-radical photo-polymerization technique could be an interesting alternative to the present products as this process has excellent ...

Upon ultraviolet irradiation, the crosslinked polymer composites with polymer dots are efficient in suppressing electrical conduction at high electric fields and elevated ...

Here, we report an appealing deep-trap ultraviolet storage phosphor, ScBO₃:Bi³⁺, which exhibits an ultra-narrowband light emission centered at 299 nm with a full width at half maximum ...

The applications of energy storage systems have been reviewed in the last section of this paper including general applications, energy utility applications, renewable ...

All-organic polymer composites for high-temperature capacitive energy storage. Zero-dimensional polymer

dots with high electron affinity are used as fillers. Deep ...

Herein, a facile and scalable approach is reported to fabricating flexible high-temperature polymer dielectrics for high-efficiency energy storage by ultraviolet irradiation.

Traditionally, storage phosphors have utilized inter-band or charge-transfer transitions for direct photoionization, typically employing short-wavelength light like ultraviolet ...

Green technologies for the manufacture of optical shutters retain a sustainable development. In this work, the electro-exploding wires and spray coating technologies are employed to deposit ...
