

What are the policies and regulations for energy storage

What are the different types of energy storage policy?

Approximately 16 states have adopted some form of energy storage policy, which broadly fall into the following categories: procurement targets, regulatory adaptation, demonstration programs, financial incentives, and consumer protections. Below we give an overview of each of these energy storage policy categories.

Is energy storage regulated?

Whilst the Department of Business, Energy & Industrial Strategy ("BEIS") and Ofgem have been supportive of energy storage and recognise the benefits and flexibility provided by the various technologies, there is no specific legislation on or regulation of storage at present.

What is a storage policy?

All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal. Regulatory changes can broaden competitive access to storage such as by updating resource planning requirements or permitting storage through rate proceedings.

What are the regulations for gas storage facilities?

The regulations require transparency from gas storage facilities, which includes providing information on contracted and available storage and the basis on which that is calculated. (33)

Does Maryland offer a state tax credit for energy storage?

In 2022, Maryland became the first state to offer state income tax credit for energy storage that provides up to \$5,000 for residential customers and up to \$75,000 for commercial and industrial customers, subject to a program total of \$750,000 per year.

How many GW of battery storage are there in the United States?

As of 2023, there is approximately 8.8 GW of operational utility-scale battery storage in the United States. The installation of utility-scale storage in the United States has primarily been concentrated in California and Texas due to supportive state policies and significant solar and wind capacity that the storage resources will support.

According to public industry data, newly installed capacity of energy storage projects in China soared to 16.5GW in 2022, of which installation of new energy storage projects hit a record high of 7.3GW/15.9GWh. The explosive growth of ...
