

# What is poland s total natural gas storage capacity

How much natural gas is stored in Poland?

Industry-specific and extensively researched technical data (partially from exclusive partnerships). A paid subscription is required for full access. Poland's natural gas storage amounted to 37.3 terawatts hour(TWh) on November 1,2023,accounting for approximately 99 percent of its capacity.

How will a new gas storage site improve Poland's energy security?

The project will increase Poland's overall gas storage capacity by 25 per cent to 4 billion cubic metres (bcm). "The project to expand our gas storage site in Wierzchowice will significantly improve Poland's energy security," said Iwona Waksmundzka-Olejniczak,the CEO of PGNiG adding that it will grant more resilience in face of an energy crisis.

How many BCM of gas storage capacity does Poland have?

Poland also has 0.2 bcmof gas storage capacity connected to the high nitrogen Lw system (equal to 20% of 2020 demand for high nitrogen natural gas). Gas Storage Poland (a subsidiary of PGNiG) owns and operates the E system storage facilities,while PGNiG directly owns and operates the Lw system storage facilities.

Who owns gas storage Poland?

Gas Storage Poland (a subsidiary of PGNiG) owns and operates the E system storage facilities,while PGNiG directly owns and operates the Lw system storage facilities. PGNiG has recently invested to expand the storage capacity of the E system. In 2020,0.1 bcm of capacity was added to the Wierzchowice storage facility.

How much natural gas does Poland produce a year?

Poland is a small producer of natural gas with domestic production stable at around 4 bcm per year,as of 2021. Despite the increased demand,gas still plays a relatively small role in Poland's energy mix. Poland is a small producer of natural gas with domestic production stable at around 4 bcm per year from 2009 to 2020.

Do I need a subscription to access Poland's natural gas storage?

A paid subscription is requiredfor full access. Poland's natural gas storage amounted to 37.3 terawatts hour (TWh) on November 1,2023,accounting for approximately 99 percent of its capacity. This was notably more than in the same period the previous year.

The Energy Information Administration (EIA) has recently released its report on Natural Gas Reserves, revealing insights on the current state of natural gas storage capacity in ...

The current levels, while lower than the 98% reported in early November, align with a European Union regulation requiring member states to maintain at least 90% capacity by November 1. The rule, introduced after ...

# What is poland s total natural gas storage capacity

Coal dominates the power sector of Poland, where it is the largest source of greenhouse gas emissions and a major employer. While the country has experienced strong growth in renewable energy over the past decade, the ...

In the Polish Exclusive Economic Zone of the Baltic Sea the gas occur as a self-contained in B 4, B 6, B 21 fields and together with crude oil in B 3 and B 8 fields. Dominating part (71.8%) of exploitable resources of natural gas in Poland is ...
