What is a residential boiler system?

A boiler is a central heating system that uses hot water or steam, which is transported through a piping system and to radiators, to heat a home. One advantage of choosing a residential boiler system is the even distribution of heat. Hot water and steam transfer heat more effectively than air by keeping the heat closer to the ground.

What are the different types of electric boiler in the UK?

As with gas boilers, there are different types of electric boilers such as electric combi boilers, electric storage combi boilers, and electric system boilers.

Can electric boilers be used with hydronic space heating systems?

Our electric boilers are designed to be used with hydronic space heating systems in low-temperature residential applications. When we refer to "hydronic space heating systems", we're talking about water heating systems that are used to heat your home, e.g. via hot water radiators or in-floor radiant heating.

How efficient is a gas boiler in the UK?

Expect to see efficiency levels of 99% compared to around 90% for most gas boilers. This also means your central heating cost per hour will get you the best amount of energy, as less energy is being wasted in conversion. What are the different types of electric boiler in the UK?

Can an electric boiler be used as a centralized heating system?

An electric boiler can be used as a stand-alone heating device, or it can be paired up with other devices in a centralized heating system. A solar system is the perfect partner for an electric boiler, and the combination of heat storage and free energy from a photovoltaic system enables very low running costs.
