

Working principle of mobile energy storage power supply vehicle

Can mobile energy storage improve power system safety and stability?

This article proposes an integrated approach that combines stationary and vehicle-mounted mobile energy storage to optimize power system safety and stability under the conditions of limiting the total investment in both types of energy storages.

What is a mobile energy storage system?

A mobile energy storage system is composed of a mobile vehicle, battery system and power conversion system. Relying on its spatial-temporal flexibility, it can be moved to different charging stations to exchange energy with the power system.

How can auxiliary energy storage systems promote sustainable electric mobility?

Auxiliary energy storage systems including FCs, ultracapacitors, flywheels, superconducting magnet, and hybrid energy storage together with their benefits, functional properties, and potential uses, are analysed and detailed in order to promote sustainable electric mobility.

Do mobile energy storage systems have a bilevel optimization model?

Therefore, mobile energy storage systems with adequate spatial-temporal flexibility are added, and work in coordination with resources in an active distribution network and repair teams to establish a bilevel optimization model.

Does a mobile energy storage system meet transportation time requirements?

Moreover, from the simulation results shown in Fig. 6 (h) and (i), the movement of the mobile energy storage system between different charging station nodes meets the transportation time requirements, which verifies the effectiveness of the MESS's spatial-temporal movement model proposed in this paper.

What is the optimal scheduling model of mobile energy storage systems?

The optimal scheduling model of mobile energy storage systems is established. Mobile energy storage systems work coordination with other resources. Regulation and control methods of resources generate a bilevel optimization model. Resilience of distribution network is enhanced through bilevel optimization.
